

handnet+ for windows

access control system software

Why pay for cards, card readers and control panels?

- ▶ **Complete Door access and monitoring**
- ▶ **Automatic hand template management**
- ▶ **Real time or audit trail mode**
- ▶ **Easy setup**

Now you can have the security and convenience of biometric access control – for the cost of a card-based system.

With HandKey® biometric readers and HandNet™ for Windows software, you'll dramatically increase your security and eliminate the wasted time of administering cards. Your hand is your card. HandNet gives you an access control network that's easy to install, simple to use, effortless to administer, and affordable.

HandNet provides complete door monitoring in real time for multiple sites--even remote sites can be monitored via modem or Ethernet. Each HandKey unit has a built-in door controller that makes creating an access control network as simple as attaching a PC. There's no additional cost per door except for the software.

Powerful and easy to use

HandNet links HandKey readers into a cen-

tralized access control system providing comprehensive door monitoring. The user-friendly interface runs on Windows 95/98/NT. Wizards make setup and system maintenance effortless.

HandNet lets you network over 1000 HandKey scanners to a central PC. Typically, the system runs "online," providing real-time activity monitoring, remote door control, and alarm response. If the computer goes off-line for any reason, all doors will continue to function without interruption, because transactions are buffered until communications to the PC can be restored.

Tens of thousands of HandKey Systems are used every day worldwide, in applications that range from health clubs and computer rooms to laboratories and stock rooms. Reliability and ease of use have established Recognition Systems as the recognized global leader in biometric access control.
